PROFESSIONAL SUMMARY

Backend-focused full-stack engineer building applied AI systems for real-world products. Started with frontend development, gaining strong product intuition and user-focused design thinking, before transitioning into backend engineering to build scalable APIs and system architectures. Currently integrating LLM capabilities into production workflows, focusing on AI orchestration, RAG pipelines, and cloud deployment. A product-led generalist passionate about rapid execution and driving technical growth in startup environments.

EXPERIENCE

fitmeup

Jan 2025 – Present

Co-Founder & Full-Stack Engineer

Izmir, Turkey

- Co-founded and engineered a B2B SaaS platform enabling fitness coaches to seamlessly manage nutrition, training programs, and student progress tracking.
- Architected a self-hosted Supabase infrastructure (PostgreSQL, Auth, Storage, Edge Functions), optimizing scalable backend operations and significantly reducing cloud costs.
- Developed modular frontend architectures and API contracts using Vue 3, Vite, TailwindCSS, and Node.js, ensuring unified data layers for both web and mobile clients.
- Owned end-to-end product delivery, rapidly shipping features and integrating real-time feedback in a high-paced, growth-stage startup environment.

Rement Soft

Jul 2024 – Sep 2024

Software Developer Intern

Ankara, Turkey

- Developed robust C# REST APIs, enforcing strict data integrity rules and reducing backend response latency.
- Collaborated within agile teams using Azure DevOps to manage CI/CD pipelines, track deployments, and ensure seamless version control.

APPLIED AI & ENGINEERING PROJECTS

Duygu-AI: Semantic Music Recommendation Engine

- Built a sentiment analysis application that maps complex user inputs to song tempos and moods utilizing the MiniLM-L12-v2 model.
- Implemented cosine similarity-based algorithms and engineered robust evaluation pipelines to benchmark performance and systematically reduce LLM hallucinations.

Autonomous RAG System & AWS Bedrock Integration

- Built an end-to-end Retrieval-Augmented Generation (RAG) system with dynamic tool-calling capabilities and semantic vector database searches.
- Configured AWS Bedrock API integrations to facilitate specialized AI agent workflows and optimize query response times.

Fit-Vision: Computer Vision Pipeline

- Developed anthropometric measurement extraction tools using OpenCV and NumPy, translating mathematical outputs into structured formats for backend integration.

HACKATHONS, COMPETITIONS & MENTORSHIPS

- Sustain2Solve x Red Bull Basement:** Selected for and participated in an AI-supported entrepreneurship bootcamp at İzQ Innovation Center.
- Startup Ecosystem Engagement:** Completed BTM (Bilgiyi Ticarileştirme Merkezi) mentorship cycles and BAMBU Step Up business model workshops to refine product strategy.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), Python, C#, x86 Assembly (SCAS), SQL
Frontend:	Vue 3, Vite, TailwindCSS, CSS3/HTML5
Backend & DB:	Node.js, Supabase, PostgreSQL, RESTful API Design
Applied AI:	LLM Integration, RAG Pipelines, Vector DBs, OpenCV, AWS Bedrock, MiniLM
DevOps & Tools:	Docker, AWS, Vercel, Git, Cursor, GitHub Copilot

EDUCATION & LANGUAGES

Izmir Bakircay University

Sep 2021 – Expected Jun 2026

B.S. in Computer Engineering

- Languages:** English (C1 Professional Working Proficiency), Turkish (Native)
